Dataset Datasheet

Course: DSPRO1/2 FS26

Project Name:	<Insert Your Project Title Here>
Student Names:	<Student Name 1, Student Name 2, Student Name 3>
Date:	November 4, 2026
GitHub Repository:	`github.com/<username>/<repo-name>`

Dataset Overview

- **Official Name:** <Name of the dataset as referenced in the repo/source>
- **Owner / Contact:** <Person or organization responsible for the data>
- **Short Description:** <2-3 sentences explaining what the dataset contains and its domain>
- **Version & Date:** <e.g., v1.0, Extraction Date: January 2026>
- **Reference:** <A reference to a paper where the dataset is described, a website, etc.>

Motivation and Intended Use

- **Primary Purpose:** <Why was this dataset originally created? (e.g., Research, Commercial, Sensor logs)>
- **Intended Use:** <Typical ML tasks it supports (e.g., Binary classification for fraud)>
- **Out-of-Scope Use:** <Risk areas where this data should not be used (e.g., Individual clinical diagnosis)>

Composition and Coverage

- **Data Types:** <Identify if Structured (tabular), Semi-structured (JSON), or Unstructured (images)>
- **Population:** <Who or what is represented? (e.g., European retail customers, medical patients)>
- **Dataset Size:** <Total records, number of features, and time span covered>
- **Known Gaps / Imbalances:** <Are any demographic groups or time periods missing?>

Sources and Collection

- **Provenance:** <Internal company systems, public open data, or third-party provider>
- **Collection Method:** <e.g., Software logs, manual entry, API scraping, or hardware sensors>
- **Jurisdictions:** <Where was the data collected? (e.g., Switzerland, Global)>

Labels and Targets

- **Target Definition:** <What is the model predicting? (e.g., 'Repaid' vs 'Defaulted')>
- **Labeling Process:** <How were labels assigned? (e.g., Human experts, business rules)>
- **Quality Control:** <How was the accuracy of the labels verified? (e.g., Double annotation)>

Quality Assessment (Data Audit)

- **Preprocessing Steps:** <Cleaning, scaling, unit conversions, or missing value handling>
- **Initial Audit Findings:** <Note any outliers, duplicate records, or data drift observed>

- **Quality Dimensions:** <Summarize checks for Completeness, Accuracy, Consistency, and Timeliness>

Legal, Ethical, and Governance

- **Sensitive Data:** <Does it contain PII (Health, Race, Location)? How is it protected?>
- **Compliance:** <What regulations apply? (e.g., EU AI Act risk level, GDPR, nFADP)>
- **Consent & Licensing:** <How was consent obtained, or what license governs use? (e.g., MIT, Creative Commons)>

Dataset Structure and Schema

- **File Formats:** <CSV / Parquet / JSON / images / etc.>
- **Directory Layout:** <e.g., raw/, processed/, labels/, docs/>
- **Schema Summary:** <main tables/files and how they relate>
- **Units & Encodings:** <units, timezones, categorical encodings>
